

Cannabinade

Cannabinade: Transform Any Drink into a THC-Infused Experience

Imagine turning any ordinary beverage into a delightful and therapeutic THC-infused drink with just a simple addition. Cannabinade offers customers unparalleled flexibility to create their own personalized THC-infused beverages, making it the ultimate solution for those seeking a convenient and versatile way to enjoy the benefits of THC.

FAQ

What is Cannabinade?

Cannabinade is a flavorless, nano-emulsified, water-soluble THC-infused powder or liquid that can be added to any food or beverage.

Why should customers care?

Cannabinade allows consumers to customize their THC experience by choosing the dose, flavor, and timing to fit their needs.

How is this better than pre-packaged THC beverages?

1. **Shelf-stable, portable, and discreet** – No need for refrigeration.
2. **Versatile and customizable** – Add the exact amount of THC you want to anything: morning coffee, evening tea, water bottle on a hike, CamelBak on the slopes, soda at the movie theater, or a post-workout smoothie.
3. **More flavor options** – Consumers aren't limited to the few flavors available in pre-packaged THC beverages.
4. **Space-efficient** – A single \$20 bottle is the size of an eye-dropper bottle, taking up minimal shelf space.

How is this better than edibles?

1. **Faster and more predictable onset** – Effects begin in 20-30 minutes.
2. **Consistent experience** – Reliable effects with every use.
3. **Zero calories** – 0 calories for liquid
4. **Sugar-free** – Ideal for health-conscious consumers.
5. **Precision dosing** – No more cutting edibles in half or nibbling corners to guess at the right dose.

Key Benefits & Differentiators

- **Unflavored** – Consumers love the freedom to mix it into any beverage or food without altering the taste.
- **Portable & Convenient** – Discreet and easy to carry anywhere, including theaters, concerts, and coffee shops.
- **Custom Dosing** –
 - **Powder**: Best for those who want larger doses at once.
 - **Liquid**: Designed for precision, allowing users to measure THC in 1mg increments.
